### **FOR IMMEDIATE RELEASE**

## **Beth Israel Medical Center Expands Document Workflow Solutions from Streamline Health®**

*Beth Israel Medical Center Extends Streamline Health's Solutions with FolderView™ and Remote Hosting Services to Enhance Operational Efficiencies*

Cincinnati, Ohio February 1, 2007 — Streamline Health Solutions, Inc. (NASDAQ Capital Market: STRM), one of the leading providers of integrated document workflow solutions, today announced that Beth Israel Medical Center, a member of Continuum Health Partners in New York City, will expand their Streamline Health document workflow solutions into the preoperative department across several additional healthcare facilities. Under this expanded agreement, Beth Israel will utilize Streamline Health's remote hosting services to facilitate the implementation and management of these solutions.

### **Streamlining Processes to Enhance Patient Care**

With 1,106 beds at three major hospital divisions, Beth Israel Medical Center is one of the largest providers of inpatient care in the state of New York, with a reputation that extends well beyond New York City. Serving New Yorkers with innovative care since 1889, Beth Israel's healthcare facilities are well known for providing care in specialty areas, such as cancer centers, cardiology and ambulatory practices to name a few. In line with their commitment to innovative care, Beth Israel plans to expand Streamline Health's workflow solutions to include FolderView™, for use in their preoperative department. This solution will provide pre-admission nurses and clinicians with web-based access to preoperative documents that are critical prior to surgery. The hospital currently uses Streamline Health's solutions for Health Information Management to enhance information flow and ensure the continuous delivery of excellent patient care.

"Through Streamline Health's document workflow and hosting solutions, Beth Israel will benefit from immediate access to critical patient information, process improvements across our acute care facilities and the ability to leverage this technology to better serve patients and their families," commented Dr. Tom Karson, chief medical information officer at Continuum Health Partners.

Using Streamline Health's remote hosting services, Beth Israel Medical Center will utilize a centralized document repository for current and historical patient health information and provide their acute care facilities with convenient access for retrieval of essential patient records. The remote hosting option will offer the hospital the technical support and expertise to get this operation up-to-speed in a timely manner, allowing them to focus on the daily demands of providing quality healthcare services.

"Streamline Health looks forward to providing Beth Israel Medical Center with a broader set of document workflow solutions that will ultimately enable them to provide optimal patient care within their community," according to Brian Patsy, president and CEO of Streamline Health. "Our solutions are designed to support healthcare decision processes and work in sync with the hospital's workflow."

### **About Beth Israel Medical Center**

Beth Israel Medical Center is a 1,106-bed, full-service tertiary teaching hospital that was founded on Manhattan's Lower East Side before the turn of the 20th century. Now a century later, the Medical Center serves individuals and families from every walk of life throughout New York City and beyond. Beth Israel is a member of Continuum Health Partners, Inc.

Continuum Health Partners, Inc. was formed in January, 1997, as a partnership of two venerable health care providers, Beth Israel Medical Center and St. Luke's-Roosevelt Hospital Center. Building upon the strengths of both institutions, the partners soon established a broad-based, integrated health services network extending throughout the New York metropolitan region. In May, 1998, the partnership was joined by a third distinguished institution, Long Island College Hospital, located in the Brooklyn Heights/Cobble Hill section of Brooklyn. Continuum continues to grow with the addition of another outstanding institution with a 100-year tradition of excellent specialty care, the New York Eye and Ear Infirmary. Today, participation in the Continuum partnership enables each member institution to better fulfill its traditional mission by making available an impressive array of resources for the provision of state-of-the-art and compassionate care. Together, Continuum is superbly equipped to identify and respond to the health-related needs of the populations served in a patient- and physician-friendly environment.

### **About Streamline Health**

Streamline Health is a leading supplier of workflow and document management tools, applications and services that assist strategic business partners and healthcare organizations to improve operational efficiencies through business process optimization. The Company provides integrated tools and technologies for automating document-intensive environments, including document workflow, document management, e-forms, portal connectivity, optical character recognition and interoperability.

The company's workflow-based services offer solutions to inefficient and labor-intensive healthcare business processes throughout the revenue cycle, such as chart coding, abstracting and completion, remote physician order processing, pre-admission registration scanning and signature capture, insurance verification, secondary billing services, explanation of benefits processing and release of information processing. The company's solutions also address the document workflow needs of the Human Resource and Supply Chain Management processes of the healthcare enterprise. All solutions are available for purchase or through a remote hosting services model that better matches customers' capital or operating budget needs. Through the remote hosting option, Streamline Health currently manages over 14 million patient charts securely accessed by over 11,000 users.

Streamline Health's solutions create a permanent document-based repository of historical health information that is complementary and can be seamlessly integrated with existing disparate clinical, financial and administrative information systems, providing convenient electronic access to all forms of patient information from any location, including secure web-based access. These integrated solutions allow providers and administrators to link existing systems with documents, which can dramatically improve the availability of patient information while decreasing direct costs associated with document retrieval, work-in-process, chart processing, document retention, and archiving.
